GRANDER

Grander is a unique sustainable technology that uses no artificial processes to revitalise water; putting nothing into water and taking nothing out.

Grander Technology may help you drink the recommended 2-3 litres of water to prevent dehydration, which has been linked to constipation, increased risk of bladder, prostate and kidney problems.

JOHANN GRANDER

Born in Tyrol, Austria, Johann Grander spent decades researching and developing Grander Technology.

An inventor and naturalist he combined his knowledge of nature, to create a device which restores the natural properties of water.

This is due to Grander Treated Water achieving the following:

- It is easier to drink more water
- It will not bloat the stomach
- It feels softer & smoother to drink

Grander Water Units:

- Have no maintenance or moving parts that require replacement.
- Uses a technology that is completely environmentally friendly.
- Uses no chemicals, electricity and is not a filter.
- Contains no magnets.

Traditional Water Treatments:

- Forcefully remove substances from water.
- Kill every living thing within water, good & bad ie. bacteria.
- Add chemicals, (chlorination) creating harmful compounds and gasses ie. chloramines and trihalomethanes.

- I use less coffee & sugar.
- My glasses & crockery are cleaner out of the dishwasher.
- My children prefer drinking Grander to juice, cordial & soft drinks.
- My fruit & vegetables last longer in the fridge beside a bottle of Grander.

The Human Body contains 70-75% water

At 10% loss dehydration sets in. At 20% loss death is usual.

Water is an essential nutrient for life, transporting nutrients to cells and waste products away.

Good water must contain Dissolved Oxygen. Oxygen is important for the correct functioning of the immune system.

The National Nutrition Survey shows 30-40 per cent of the population don't drink enough water.

How natural is the water once it's been sterilised, had chemicals added, distilled or been through reverse osmosis?

All the right foods you eat will never make up for all the bad water you drink!

Commercial

3 Signs of Healthy Water

1. Stability
2. Higher Oxygen
3. Greater Solvency

Stability:

- Water must be able to maintain itself for lengthy periods of time without breeding harmful bacteria or algae.

Higher Oxygen:

- The higher amount of oxygen the better quality the water is, however this oxygen must be natural with no artificial processes, and sustainable over a long period of time.

Greater Solvency:

- Water is the transport mechanism for the body.
- Water's job is to dissolve and transport both beneficial nutrients and minerals to the body, and harmful toxins and by-products away.
