

## **WillauTronic® Products**

### **QUESTIONS and ANSWERS**

---

#### **Can the efficacy of the WillauTronic® Esmog products be technically measured?**

- The efficacy of the WillauTronic® Esmog products cannot be measured by the technical instruments available today (just as radioactivity couldn't be measured in 1903, when Marie Currie discovered radium). The efficacy of the WillauTronic® products unfolds exclusively, and can only be appreciated, on an informatory level. This means that WillauTronic® Esmog products do not change the parts of Esmog which can be physically measured. Fitting your device (microwave, cell / cordless phone, etc) with a Willau-Tronic® Esmog product will not affect the values obtained by physical measurements. Great emphasis was placed on this fact during the development stage of the Willau-Tronic® Esmog products since changing the sender frequency of a cell phone, for example, would constitute an illicit interference with the technology of the device in question.

#### **Do any of the WillauTronic® products require maintenance?**

- None of the WillauTronic® products require maintenance. Only when the programmed material of the WillauTronic® products is damaged will their efficacy be compromised.
- All WillauTronic® products come with a 14-day right to be returned if found unsatisfactory, provided they will be returned undamaged (in addition, the WillauTronic® products come with a five year guarantee).

#### **How can one appreciate the efficacy of the WillauTronic® products?**

- The efficacy of any WillauTronic® product unfolds in the so called "informatory space". This physical phenomenon was expounded on in *The Unified Quantum Field Theory* authored by German physicist Burkhard Heim (1925-2001). Heim's mathematical calculations have been verified by computers, down to the last decimal place (see DESY [Deutsches Elektronen-Synchrotron]).
- According to Heim there is an informatory – or immaterial – component (pertaining to subtle energies / bioenergetics fields) to each physical (material) dimension. An integral part of this immaterial realm is the so called „informatory dimension“. It follows that physical measuring tools will continue to fail to detect any changes once a WillauTronic® Esmog device has been fitted unless they consider measuring biological systems.

#### **WillauTronic® don't claim that their products...**

- This is why WillauTronic® make no claims whatsoever that their products physically shield / block / reduce electric / electromagnetic radiation / energies / areas of interference. Rather WillauTronic® products harmonize the negative information contained in both electromagnetic radiation and areas of interference in the so called „informatory space“, rendering them more harmonious for biological systems (human beings, animals, plants). It follows that once a WillauTronic® product has been fitted onto a device, physical electric / electromagnetic radiation / energies / areas of interference can be measured exclusively with physical measuring devices in the same intensity without considering biological measuring systems. Physicists researching this phenomenon acknowledge and accept the existence of an informatory dimension.
- According to Heim's *Unified Quantum Field Theory*, there is an interaction between the "informatory space in hyper space" and the "physical space in relational space". Based on this theory, using appropriate measuring devices, changes in both the energetic and harmony status of biological objects, once fitted with a WillauTronic® protective chip, can most certainly be observed and explained.

#### **Why is it impossible to technically measure WillauTronic® products?**

- Quantum physics and biophysics differ in one major aspect. Mechanical physics examines "dead" matter and its appearance of forms and states, applying measuring devices especially designed for this purpose.

- Quantum physics and biophysics, on the other hand, examine living matter and its ability to obtain energetic and homeostatic correlations and interactions. It follows that in order to be able to record changes at a quantum level, it is imperative that measuring devices be combined with biological systems. When biotechnical measuring methods are applied, the efficacy of the
- WillauTronic® products, i.e., changes in the energetic values of biosystems, can be observed and proven. Measurements of this kind are called bioenergetic measurements.
- Australian physiologist and Nobel Prize laureate Sir John Carew Eccles corroborates this point: *“Questions based on a higher scientific level cannot be answered with the know-ledge of a lower scientific understanding. It is an impossibility.”*

### **Why are WillauTronic® products not patented?**

- In order to obtain patent protection, detailed product information must be provided by the inventor which will consequently allow for anyone to appreciate the most intricate workings of the product in question. The invention is hence becoming “common property“, in as much as anyone can freely do their research into the product, making it game for public discussion. In addition, the realm of subtle energies, which is precisely where the efficacy of WillauTronic® products is observed, cannot, as of yet, be measured with the tools currently applied by orthodox physics. Given this backdrop, patenting would be very difficult, if not downright impossible.

### **Apparently there are companies claiming to possess certificates pertaining to tests done in compliance with orthodox scientific standards.**

- Some manufacturers claim that their products are MOT certified (British technical inspection association / TÜV - German association of technical inspection; no such equivalent in the USA). These certificates do not make a statement on the efficacy of the tested products; rather they confirm that the products do not interfere with other electric appliances and that the materials used do not cause allergic reactions. In other words, these certificates are hogwash. There are no patents to date, let alone technical certificates pertaining to **product efficacy in the realm of subtle energies**.

### **Can the efficacy of the WillauTronic® products be measured?**

- The answer is a resounding yes. However, these measurements can only be conducted on biological systems (human beings or animals). Such biotechnical measurements are commonly used in natural medicine, especially where EEG, EKG and X-ray measurements would otherwise compromise delicate tissues.

### **What kind of measuring methods are these?**

The most common measuring methods used in natural medicine are:

- EAP measurements according to Voll;
- Dark field microscopy according to Enderlein;
- Gas Discharge Visualization (GDV) according to Professor Korotkov. The GDV technology has been approved by the Russian health ministry and is referred to as „medicinal technology“.
- Kinesiologie according to IKAMED;
- Radiästhesia;
- Geomagnetometer;
- Geomagnetometer measurements with the aid of a so called ELF magnetometer developed by certified geophysicist Stephan Petöfalvi
- IFBIO-ETAScan, bioenergetic diagnostic device;
- Victor Vital Point diagnosis, version 1.0.5.0;
- D-F-M, Diagnosis for functional medicine (similar to EEG und EKG);
- Water crystal methodology according to Dr Masaru Emoto.

### **How can the efficacy of the WillauTronic® products be explained?**

- WillauTronic® products reduce the stress factor caused by electrosmog, thus providing relief for the immune system and re-activating the body's self regulatory properties. By way of a special process (destructive interference) and a unique technology developed by Walter Laufs (iHIT® - Inverted Harmonized Information Technology) the negative information contained in Esmog is neutralized. Proof regarding the efficacy of the WillauTronic® products cannot be obtained unless measurements are carried out on a biosystem / test person. Again: efficacy of the
- WillauTronic® products are not caused by technically changing the frequency. Rather, WillauTronic® products are rendered efficacious by neutralizing stress inducing information, the results of which can be measured and demonstrated by way of increased energy levels, decrease in causal conditions, increased well-being and stabilization of the immune system.

### **What does stress have to do with information?**

- Whether or not a person is stressed (experiences stress) depends on the information the body receives via the sensory system (taste, smell, sound, vision, touch). New stimuli are compared with any and all past experiences concerning self perception as well as perceptions pertaining to the environment, then filed and stored. The transferred information will trigger a chain reaction of responses in the body, which will vary from person to person depending on the information conveyed. These processes, which happen at the rate of several million per second, are quite normal and go completely unnoticed by the conscious mind.
- These sensations are processed in different sections of the brain and only a minute part of them is perceived on a conscious level. The beyond conscious mind blocks off more than 99% of all sensory sensations, which hence remain unconscious. This is a way for the body to protect itself from over-stimulation. It follows that stimuli selection, which is perceived on a conscious level, is highly individual and varies from person to person.

### **Does the body react in degrees to continued stress exposure?**

It does, indeed. The effects of Esmog on the biosystem can be broken down into three stages:

- **Stage 1 – disorder**  
The body's homeostasis becomes compromised. At this stage, most people complain about sleeping disorders, loss of appetite, nervousness, headache and lack of concentration.
- **Stage 2 – impact**  
Symptoms become more pronounced and tangible. Hyperactivity (in children), rheumatism, migraine, depression, proneness to allergies and consequently a reduced immune response can be observed.
- **Stage 3 – disease**  
All manner of irreversible disease may manifest unless Esmog is reduced.

### **Following patient data evaluation, we were able to conclude that:**

- Depending on both their physical size and duration of impact, electromagnetic fields cause additional "technical stress".
- Unless Esmog causing factors are brought down to individual tolerance levels in good time, the body may experience health complaints of all types, including serious disorders.
- Basically, it can be said that children, adolescents, the elderly and people with a low immune response are particularly more prone to Esmog related complaints than people with a reasonable constitution.

### **Do WillauTronic® products require special care or maintenance?**

- No, none of the WillauTronic® products require special care or maintenance of any kind, once properly installed.

### **Do WillauTronic® products use electricity?**

- No, none of the WillauTronic® products use electricity, except the WillauTronic® Area Neutralizer.

### **Are WillauTronic® products able to heal disease?**

- WillauTronic® products do not carry any health claims whatsoever.

### **When was the WillauTronic® Company founded?**

- Initially, the WillauTronic® Company was founded in 2003 by Walter Laufs with him as its sole owner / CEO / CSO. Corporatization had become a necessity at the time since an increasing number of Walter Laufs' then patients were eager to purchase his efficacious Esmog products. In Germany, the sale of products in a medical practice is prohibited by law; hence it had become a necessity for Walter Laufs to found a company in order to market his proprietary Esmog products.
- Word about the highly efficacious WillauTronic® Esmog products had spread in record time around the world, prompting Walter Laufs to register WillauTronic®, LLC in Florida, USA, in January of 2005, with his then American partner. WillauTronic®, LLC was handling worldwide distribution of the proprietary WillauTronic® Esmog products. In January 2007, however, Walter Laufs was forced to terminate this partnership and establish his own Willau Tech Research and Development Company.
- As of January 2007, worldwide distribution of the WillauTronic® products is being handled by newly founded Swiss company WiTraCon AG.

---

## **WillauTronic® Products and Their Mode of Action**

---

Forming the very basis of the WillauTronic® products, the unrivalled iHIT® Technology is the result of research in the area of Esmog spanning more than 15 years, eight years of which were conducted at Walter Laufs' former clinic in Southern Germany's Black Forest. The substantial physical and medical experience gained during that time was consequently integrated into his proprietary WillauTronic® Esmog products.

- Special care has gone into selecting the proper metal alloy used for the WillauTronic® Esmog chips, which plays a major part in their effectiveness.
- Performance of the WillauTronic® products was greatly enhanced by integrating both a flat coil and a condenser.
- Notwithstanding the chips' many remarkable features, it is Walter Laufs' unparalleled method of programming (which he developed especially for his WillauTronic® product range) with the help of which he was able to permanently transfer information onto blank metal chips so that no degradation of information occurs. Therefore each chip is also an information carrier. Numerous medical tests were able to confirm the final results.

### **Some technical details**

#### **Why was aluminum preferred over plastic for the manufacture of the WillauTronic® e-smog chip?**

- The efficacy of each WillauTronic® Esmog product unfolds exclusively on an informatory level. It is precisely for this reason that painstaking care had to be placed on which materials were to be used for their manufacture.
  - 1 Material purity is paramount. Depending on its intended purpose, aluminum is alloyed with other metals. These alloys may cause both allergic reactions and reduce the body's energetic levels.
  - 2 Furthermore, the metal alloy needed to meet strict requirements in terms of its molecular density, so the information to be programmed onto it would remain effective on a permanent basis instead of degrading after a little while as is the case with plastic, for example. Aside from having an extremely low molecular density, plastic is energetically incompatible with the human body, as evidenced by energetic tests done on patients.

### **Why do the WillauTronic® chips require a flat coil and a condenser?**

- The repercussions of Esmog affect the entire electro-physical sector. Therefore viable solutions must take into consideration the laws of physics. The concept of flat coils and condensers is part of an electronic technician's fundamental training and shall not be discussed in this write-up. What I should like to discuss, however, is the process of manufacture of the WillauTronic® Esmog products and the materials used.
- By way of the process of screen-printing both coil and condenser are affixed onto each WillauTronic® chip. This process is standard procedure for the manufacture of printed circuit boards (PCB), where a conductive silver or carbon varnish serves as the electric conductor. The conductive carbon varnish is applied by way of screen printing. Once cured (hardened), the varnish is now a polymer film homogeneously imbedding solid matter. The pigments and fillers are electrically conducting. The concentration of the conducting substances must be high enough to generate electricity in the varnish when the particles touch one another. Carbon and graphite powder or silver powder is thus used as a conductive filler.

### **Finding the proper mixing ratio of the conductive varnish**

- Manufacturing a conductive varnish requires the integration of conductive substances the concentration of which must be high enough to allow for an electricity flow when the particles touch one another (i.e., distance between the particles = 10nm). The maximum concentration of the conductive particles depends on the structure and the specific surface. The varnish can only integrate as much solid matter as can be homogeneously imbedded into the polymer. Due to the fact that soot is manufactured synthetically, it is possible to carefully control the structure and specific surface.
- One of the many challenges Walter Laufs was faced with during the manufacturing stage of his WillauTronic® Esmog products was the fact that he had to choose, from the vast variety of differing soots, the very ones which would optimally respond to the demanding requirement of allowing for electric conductivity. Given their amorphous structure, however, soots alone cannot obtain sufficient recording density; hence he had to use additional graphite of a fortified layered structure. This concisely attuned combination was the result of a protracted series of tests: he had finally found the proper conductive varnish with the required resistance value of 20  $\Omega/\text{cm}^2$  and a varnish thickness of 8-5  $\mu\text{m}$ .
- To ensure optimum protection of both the coil's highly sensitive winding and the condenser, and to avoid the risk of having a short circuit, each chip features an insulation consisting of a neutral layer of glue which allows for the chip to be firmly affixed onto the device it is designed for.

### **Watching a blank chip become a programmed / authentic WillauTronic® product**

While at this stage of the production run the WillauTronic® chip is still only a blank chip, its outward appearance is markedly different from any plastic Esmog sticker available to date. Notwithstanding the fact that several electric values can be measured at this stage, the WillauTronic® chip cannot, as of yet, meet the requirements for which it is ultimately designed.

- It is only during the final programming stage (by means of a specially developed software and electronics) that the chip becomes an original WillauTronic® Esmog product. This programming technique is unparalleled worldwide and therefore cannot be copied.
- By way of a special process (destructive interference) and a state-of-the-art technology developed by Walter Laufs (iHIT® – Inverted Harmonized Information Technology) the negative information contained in Esmog is neutralized.
- In other words: WillauTronic® Esmog products do not change the sender frequency or the amplitude. Rather their efficacy lies exclusively in their ability to neutralize negative information, a fact corroborated and appreciated by the innumerable natural medical tests and highly satisfied customers worldwide who enjoy the benefits of the WillauTronic® products.

---

## How can the WillauTronic® products be explained from a medical point of view?

---

To answer this question somewhat comprehensibly, it is necessary to address some key questions pertaining to physics, chemistry, bio-technology and quantum physics – as well as to briefly touch upon orthodox science and its retrenched mindset and line of action. While appearing to be an out-of-line endeavor at first glance, this statement is anything but that upon closer inspection.

If one set out to explain both the efficacy and side effects of Aspirin, for instance, one would equally have to touch upon a multitude of scientific fields, such as general and pharmaceutical chemistry, pharmacology, toxicology, natural products chemistry, radiochemistry, physical chemistry, spectroscopy, and organic / inorganic chemistry. This simple example illustrates that claims of any kind are never to be made unless they can be irrefutably corroborated.

### The WillauTronic® products

- All of our publicized material unanimously points to the fact that the efficacy of the WillauTronic® products unfolds exclusively on an informatory level (i.e., in the realm of subtle energies). In other words: WillauTronic® products do not change the part of Esmog which can be physically measured.

### What orthodox science has to say

- Given the level of present knowledge of orthodox science, it is hardly surprising that this very same establishment should decry the above remarks as “unreasonable” and “untenable”. But what happens when present knowledge will need to be updated and brought in line with new discoveries? The libraries of the world are full of generalized academic ignorance and their rectification at a later date. It is particularly the new realizations procured by quantum physics which make it blatantly obvious that science’s mindset will urgently have to be updated in more fields, and ways, than one (Heim, Popp, Bearden, Bischof, Aharonov, Bohm, et al). In Hamlet, William Shakespeare has his leading man recite the following: *“There are more things in heaven and earth, Horatio, than are dreamt of in your fantasy.”*
- While appreciating that science has come a long way over the centuries and made formidable contributions to the global community, it is equally obvious that the current level of knowledge of the scientific community must be likened to the intellectual horizon of an infant which is about to learn how to walk. The more comfortable he becomes making his first steps, the more he is able to reach for and actually touch the objects he has only been able to see from a distance until then. It is only now that the great adventure of exploration, of research and perception / appreciation of his environment begins.
- No scientist of repute will seriously claim that all discoveries have been made and that there’s nothing new “out there” worth discovering. The term science implies accrument of knowledge by way of research, which in turn implies the methodical search for new insights and knowledge, its systematic documentation and subsequent publication in scientific papers.

### Science is thinking in a new direction – The birth of a new worldview

- Quantum physics and chaos research are once again approaching the phenomenon referred to as “subtle energies“. According to Erwin Laszlo, physics is increasingly coming to appreciate the concept of the universe not just being all solid matter, but rather to regard it as a so called energy plenum, an energetic state yielding different forms of matter by way of specific wave forms. As a consequence even living organisms are “only” different wave forms. The basic theory of a unified energetic field which generates matter has an immediate correlation to everything in existence. This hypothesis leads us to the conclusion that any and all processes happening in that system interact and affect each other. It is only by acknowledging this perfectly balanced system that the Earth’s ecological unity can be explained.

### **The realizations of quantum physics**

- According to quantum physics matter and energy are inseparably linked with one another. Albert Einstein and Max Planck realized that matter is nothing else but highly densified energy. Consequently, all bio-organisms (human beings, animals, plants) are merely animated matter. The human body is clearly tangible and hence a solid substance but its functions – metabolism, lymph system, acid alkaline balance, etc – are controlled by information. **Hence matter is only a carrier of information and vibration.** Each cell, each organ and each organism has a specific, distinctive and identifiable frequency (or vibration pattern) of its own.

### **The Unified Quantum Field Theory according to Burkhard Heim**

- Walter Dröscher's and Burkhard Heim's *Unified Quantum Field Theory, Extended* shook the very basis of physics which until that moment had been considered unshakable. Heim's results could not be refuted; his mathematical calculations were verified by computers, down to the last decimal place (see DESY [Deutsches Elektronen-Synchrotron]).
- Based on Heim's *Unified Quantum Field Theory* – which is considered the very basis of quantum medicine – the scientific community is at long last acknowledging and supporting phenomena the effects of which can only be evidenced in the area of subtle energies, a field hitherto much rejected, vilified and decried by orthodox science.

These phenomena include (to name but a few):

- homeopathy
- bioresonance
- kinesiology
- acupuncture
- radiaesthetics
- radionics

### **Orthodox science's continued reluctance to accept natural medicine**

The continued reluctance on the part of orthodox science and medicine to acknowledge the therapies and diagnostic methods adopted by natural medicine – which are free of side effects and very successfully applied – is solely based on the fact that efficacy of these treatments cannot be proven by way of current physical measuring methods and devices. Regardless of the phenomenal success natural medicine continues to enjoy in the treatment of its increasing number of patients, orthodox physics and medicine keep refusing to accept its achievements, calling them a “sham” and “placebos”.

Of course, academic ignorance is nothing new. In 1663, Galileo Galilei (1564-1642) was forced to abjure, before a Roman inquisition court and after threats of torture and being burnt at the stake, that the earth revolved around the sun. Not keen to review Galilei's findings, the powers that be sentenced him to lifelong imprisonment in the dungeon, which was later reduced to a lifelong house arrest.

What would have happened if in 1663 a brilliant inventor would have discovered the TV remote control and explained its workings to the inquisition court? Needless to say that he would have been called a heretic and ended up burning at the stake.

### **Academic ignorance: The proverbial golden thread**

This telling incident dates back some 400 years ago. Yet when it comes to new discoveries academic ignorance continues to permeate the establishment like the proverbial golden thread – and seems determined to stay. The process of acceptance on part of the orthodoxy is a methodical, albeit tedious one:

- stage 1: categorical rejection and countering of new knowledge;
- stage 2: astonishment and amazement at the fantastic new discoveries (which until then had been vehemently rejected);
- stage 3: it is generally agreed that the new discoveries are old hat since orthodoxy has always supported and accepted them.

How does one explain this idiosyncrasy? Could this be an act of maliciousness on part of the establishment? This author ventures the guess that it is in the nature of science to react like this. At first, physicists create a hypothesis following which they try to do their mathematical calculations based on said hypothesis. If these calculations produce satisfactory results, and other scientists obtain identical results, the new theory is accepted by the scientific community, thus representing the “current” standard of knowledge of orthodox science.

### **The first signs of yet another paradigm shift**

Much to the establishment’s chagrin, however, this mechanism is becoming increasingly ineffective. Fritjof Capra, Ph.D., physicist and systems theorist, is a founding director of the Center for Ecoliteracy in Berkeley, California, which promotes ecology and systems thinking in primary and secondary education. He states:

- *“The statement that the present transformations of our value system will affect many branches of science may surprise those who believe in an objective, worth-free science; it is, however, one of the important implications of new physics. Heisenberg’s contributions to the quantum theory [...]clearly lead to the realization that the classical ideal of scientific objectivity can no longer be upheld.”*

In a press conference held in Berlin in August 2004 on the occasion of the 19<sup>th</sup> International Symposium on Lattice Field Theory, Dr Capra was even more outspoken:

- *“The fascinating world of elementary particles and their partly rather amazing properties, which completely elude from our every day life experiences, propelled some 400 participants to come to the Lattice 2001 symposium in Berlin from all the continents of the Earth. The physicists want to find out whether our hypotheses actually describe the physics of elementary particles, as demonstrated in the experiment. In doing so, the researchers need to rise to the challenge that **conventional methods for measuring theoretic models are a total failure!**”*
- *“It is completely unclear today whether the models for further discussion of physics (such as the standard model of elementary particle physics developed in the 1960s), which have been theoretically examined and confirmed many times over, provide the correct physical description with distances below  $10^{-16}$  cm. **Physicists suspect that smaller distances might reveal an entirely new physics – a physics which we neither know nor ever imagined.**”*

**Given this new situation, science is forced to accept both the realm of subtle energies and the informatory scope, even if the basics of this new field and its many branches cannot, as of yet, be grasped.**

### **The WillauTronic® products and the realm of subtle energies**

- The efficacy of each WillauTronic® Esmog product unfolds exclusively on an informatory level (i.e., in the realm of subtle energies). This means that the physical parts of Esmog which can be measured will not be changed by the WillauTronic® products. This begs the question: How does one then explain the efficacy of the Willau-Tronic® products?

A living organism is not only controlled by the delicate biochemical interaction between molecules, cells, tissues, organs and organ systems. **Equally important is the interaction between information and molecules, cells, tissues, organs and organ systems.** Each biological system possesses its own localized information as well as its own localized field which is connected to the respective fields of all the other biological systems (just as each quantum is connected to all the other quantum’s with which it shared the same quantum state). The organism consists of particles which combine to form atoms and molecules and which, in turn, form cells, tissue and organs. **Each individual unit possesses both a material and an informatory aspect.**

First let’s examine the **material aspect**. The “material” quantum particles form atoms, the atoms form molecules, the cells form the tissue, the tissue forms organs and finally the organs form the organism.

Let's now take a look at the **informatory aspect**. The physical elements of the individual levels can only get organized because of their matching frequencies, i.e., they form a coherent level. Without this coherence the organism will fall apart. **The organism can only cooperate as long as the information is shared among the individual components – in other words, as long as there is an information exchange from cell to cell.**

### **Information is the life-sustaining element of the body**

In physics, the term information transfer (or information exchange) denotes that an event takes place at one point while its effects can be observed at another. Causality is based on the transfer (exchange) of information. In other words: the transfer / exchange of information is what happens between cause and effect.

Therefore any and all metabolic processes in the body are controlled by information, the frequency of which is attuned to precision. If the flux of information among the cells is disrupted, the biochemical processes are compromised – this, in turn, will be evidenced as a reduced energetic status.

The world over, more and more people feel

- burnt out
- empty
- tired and listless.

Or they suffer from the following symptoms:

- memory loss / concentration disorder
- being unable to make decisions
- lack of motivation and reduced performance at the workplace
- sleep disorders
- reduced immune response
- CFS (Chronic Fatigue Syndrome / burnout).

In addition, our life styles – both on a professional and every day level – are getting more and more hectic. Time displacement (shift working), sleep deficit and audio-visual over-stimulation keep people in constant action mode. An unbalanced diet focusing mostly on high-calorie fast food and eaten too late in the evening is the cause for reduced energy levels. Relaxation is sought by way of consuming alcohol, nicotine or drugs, all of which dull the nervous system and are adding to the body's raised stress levels.

### **Stress Factor Number One: Electrosmog**

The ultimate stress factor, electrosmog (Esmog), goes practically unnoticed by the general population. Esmog is ubiquitous, it permeates everyone and everything. No matter where we are – at home, at the workplace, at school, in the car, in the department store or out-of-doors – electromagnetic fields of the most diverse frequencies are everywhere, aggravating our already compromised stress levels. Stress is not to be taken lightly, however, as it affects body and mind.

### **How does the body react when exposed to permanent stress?**

Permanent immune overload may initially trigger a benign disease which might gradually turn into a serious health problem if the overload persists over an extended period of time. A multitude of studies have proven the negative effects of so called stress hormones. Stress produces high concentrations of adrenalin, noradrenalin or cortisol in the blood, eventually causing long-term damage to the blood vessels, particularly to the kidney. Long-term stress is also the cause of degenerative changes and finally kidney failure (death). During World War 1, countless soldiers died of trench (or war) nephritis which, as we know today, was the result of excessive stress exposure.

### **Information transfer in the human body**

Information is transferred by way of signals, modulations and fields, controlling chemical processes, growth, regeneration, wound healing, etc. EKG, EEG, neuronal fields and nervous summations have been studied

extensively when invaded by Esmog and consensus of the damage done, are considered unequivocal. The natural physical rhythms and the Earth's magnetic field properties are the factors for the oscillating reactions of this biological train of impulses. **However, if harmless artificial fields interact with information-carrying natural fields, and if interferences are thus being created, the base information (original information) of these natural fields is temporarily or lastingly changed.** The biological organism increasingly "loses its beat", it "gets out of step" – it no longer "ticks right".

Migratory birds and homing pigeons get off course, bumble bees lose their way, large groups of an animal species are stressed and hence disoriented, nervous signals no longer trigger reactions, neuro-hormones are no longer produced or controlled in synchronicity with other biochemical processes, enzymes cease to be produced in time or according to the body's requirements, cell regeneration is incomplete, etc.

Hence information is more than just a few words, a book, a newspaper, a mathematical formula, a few bits or bytes... **In-formation is a variable which is physically active and, aside from matter and energy, a third force directly correlated with them.**

The amount of data processed by the body on a daily basis is staggering. Every second a cell sends and processes some 250 million units of information (bits). The human body consists of 80-100 trillion cells. In other words, every second the body processes the gigantic size of 250 million times 80 trillion bits of information. Add to that the fact that each second there are millions of cells dying while almost just as many are being newly created. All these processes operate, among other things, on the basis of electromagnetic waves.

- In a bio-system electric currents are generated wherever there are moving ions. Their movement is generated by electric fields and differing concentrations in the ions. The difference in ion concentration on the inside and outside of the membrane generates differences in the electric potential, which is also known as "membrane potential". Membrane potentials can be observed on every cell. For nervous cells, changes in the membrane potential serve as carriers for transmitted information. In nervous cells – as well as in the equally excitable sensory and muscle cells – one expediently differentiates between the normal, uninfluenced membrane potential called "equilibrium potential" (rest potential) and the reversible changes of this potential, called "action potential".

**Electrochemical processes in the cell membrane form the basis for the information transfer in the nervous system.** This statement takes us back to the WillauTronic® products and their de-stressing properties.

As previously said, a special process (destructive interference) supported by a state-of-the-art technology (iHIT® - Inverted Harmonized Information Technology) neutralize the negative information contained in Esmog. What does that mean? The WillauTronic® products are so called **passive** products which do not require any power supply. What they do need for activation, however, is an electric field which is supplied by the devices they are affixed to once these are in working mode / switched on. Activation of the WillauTronic® Area Neutralizer (**active** product) is generated by plugging it into an operative power outlet. For the purpose of proper activation Walter Laufs developed special devices with the help of which it is possible to modulate the different frequencies and varying kinds of information of the electric fields (interference signal) onto the information carrier. The interference signal modulated onto the WillauTronic® products resonates with the relevant input / output signals. **Since we are looking at two opposing signals, the process of destructive interference can be observed, during which the negative information contained in Esmog is neutralized.**

However, the factual process of information modulation, as described above, is far more complicated and elaborate. For copyright / proprietary reasons the author will not enlarge any further upon the detailed technical workings of the WillauTronic® products.

Despite the fact that information cannot, as of yet, be measured, as expounded above, the effects of information are very real, as explained in the following, simplified example:

Let's assume you have an average family with two children, a son and a daughter, both of whom attend high school and are scheduled to graduate in one year's time. For the time being, however, your son's inexplicably poor performance at school is causing great concern to everyone. It is a Friday afternoon: you come home from work and look forward to a relaxing weekend with your family. However, your wife and kids are in a gloomy mood. Your wife hands you a letter from the school principal, advising you that your son has been suspended from class on counts of drug abuse and drug trafficking. In addition, the district attorney's office has been notified.

All this letter contains is information which is upsetting the entire family, despite your son's reaffirming his innocence.

There is a great deal of tension and frustration happening that weekend, accompanied by recriminations, emotional discussions and tears. Monday morning: the weekend left you emotionally exhausted, you feel incapable of facing the workload waiting for you in the office. All you can think about is contacting the school principal. Just at that moment, the mail man hands you a registered letter – from the high school. Your heart is pounding as you open the letter: the school principal is all apologetic, acknowledging that a mistake has been made and your son wrongfully accused. The drug trafficker was a boy by the same name as your son's. Unfortunately, the first letter was sent to the wrong address.

You round up the family to read them the letter which – just like the first one – simply contains information. Imagine how your family reacts to the information content, in both cases.

You decide to have a scientific analysis done of both letters, hoping to be able to learn something about the information content. The lab report includes the following results:

- a chemical analysis of the paper and the color composition of the ink used for printing;
- the exact size of the paper;
- the specific weight of the paper;
- a mathematical analysis of how many times individual letters were used;
- a statistical evaluation of the punctuation;
- a statistical evaluation determining how many words and sentences were used.

If you had received the lab report instead of the letter in the first place, there would not have been any cause for aggravation and upset like your family had experienced over the weekend.

Admittedly, this is a rather simplistic example but the point is made: information is the trigger that spoiled your weekend. Information is the decisive factor responsible for both action and reaction. Let's also bear in mind that **information cannot be measured.**

**The positive and stress regulating properties of the WillauTronic® products can only be scientifically explained and appreciated on the basis of Burkhard Heim's *Unified Quantum Field Theory.***

It is the author's hope that this simplified account was able to provide the reader with relevant core statements pertaining to the term INFORMATION. Numerous reports from the field of quantum physics point to interfaces with metaphysics, despite its continued rejection by the orthodox community which likes to regard metaphysics as a barrier not to be crossed – unless one wishes to jeopardize one's scientific sobriety and seriousness. Hence the tenet: physics ends where metaphysics begins.

What if metaphysics is not a barrier but a door opening towards new, as of yet unexplored phenomena in the realm of subtle energies?

What if the orthodox community erected this barrier on the basis of academic ignorance?

It would be advisable, for the future of science, and hence for humanity, for orthodox science not to bring new discoveries in line with outdated thinking. Rather, science should rise to the challenge and bring outdated thinking in line with new discoveries.

In closing, I would like to quote Albert Einstein:

***“The free, unhampered exchange of ideas and scientific conclusions is necessary for the sound development of science, as it is in all spheres of cultural life. We must not conceal from ourselves that no improvement in the present depressing situation is possible without a severe struggle; for the handful of those who are really determined to do something is minute in comparison with the mass of the lukewarm and the misguided. Humanity is going to need a substantially new way of thinking if it is to survive!”***
