

OMX probiotics

The preparation of OM-X involves the use of natural organic ingredients and a natural, no-chemical fermentation process unlike any of the destructive synthetic methods used by industry. As a superior biotechnology producer OM-X international succeeded in concentrating the bioactivity and fermentation by-products from several different strains of friendly lactic acid bacteria, within a single OM-X capsule. This unique concentrated form of probiotic functional food harnesses the benefits of the traditional fermented foods.

The fermentation and preparation of OM-X is scientifically monitored for up to 5 years and involves 2 distinct fermentation stages:

The primary stage is allowed to proceed in a natural clean environment for 2 to 3 years. At this early stage a significant number of natural lactic acid bacteria are involved in the initial processing and transformation of the ingredients

The secondary stage is carried out under a controlled scientific environment for 1 to 2 years and maintained by the action of a special blend of 16 strains of friendly lactic acid bacteria including the unique lactobacillus gasseri ATCC strain. The bacterial count is corrected to approximately 120 million/grm prior to encapsulation.

The strains used in the preparation of our new and improved OM-X formulation are:

Lactobacillus gasseri ATCC	Lactobacillus bulgaricus
Lactobacillus acidophilus	Lactobacillus casei
Lactobacillus delbruckii	Lactobacillus arabinosus
Lactobacillus caucasicus	Lactobacillus musicus
Lactobacillus leishmanni	Lactobacillus plantarum
Lactobacillus thermophilus	Lactobacillus lactis
Leuconostoc mesenteroides	Streptococcus thermophilus
Streptococcus cremoris	Streptococcus lactis

We expect this new formulation to be available in Australia in the early part of 2003. Through their beneficial fermentative action the friendly bacteria digest, convert and transform complex food substances into useful and essential bio-molecules that support the intestinal balance, with the ultimate purpose of nourishing and maintaining the human body. These pre-digested by-products are readily available and thus easier to be absorbed. Each capsule of OM-X contains a unique form of concentrated by-products including:

- 19 amino acids (essential nutritional building blocks)
- 5 vitamins (essential nutritional factors)
- 9 minerals (essential nutritional co-factors)
- Organic acids (important intestinal regulators) and
- Lactone (regulator of intestinal bacteria activity)

The OM-X probiotic functional food will assist to restore and maintain the intestinal microflora.

Directions:

The serving suggestion is one or two capsules per day, taken with water ½ hours before meals. Alternatively, OM-X capsules may be chewed. After a while you may feel like varying the serving suggestion, starting your consumption with one capsule a day increasing by one extra every three days for at least 2 weeks.

It's your choice; good nutrition is all about how you feel and what's right for your body
